

disturbance_sensitivity

(b) Speckle consistency (disturbance sensitivity)

Pooled fiber-discriminability (same metric set as length experiment):

Intra-class L2 distance: 12.9949

Inter-class L2 distance: 23.5512

Inter / Intra ratio: 1.8123

Higher mean within-fiber NCC $\Rightarrow$ speckles more similar across repeated captures under disturbance; larger inter/intra $\Rightarrow$ better separability.
